SUMMARY

Full-stack engineer at Avodah Software since Feb 2024, building client-facing software across scheduling, payments, AI-assisted workflows, CRM dashboards, and integrations. Strongest where product scoping, TypeScript/React implementation, vendor APIs, infrastructure, and production hardening meet.

SKILLS

TypeScript, React, Node/Bun, Fastify, Hono, PostgreSQL, Supabase, Drizzle, Firebase, Cloudflare Workers/D1/Pages, Stripe Connect, Clerk, Sentry, Microsoft Graph, Deepgram, OpenAI/OpenRouter, Promptfoo, Playwright, Vitest

EXPERIENCE

Avodah Software — Full Stack Software Engineer Feb 2024–Present

- Built client-facing software across scheduling, payments, healthcare workflows, CRM dashboards, and integration-heavy admin tools; worked across product scoping, UI, backend, vendor APIs, deployment, demos, and production hardening.
- Built a Cloudflare Workers/D1 scheduling integration syncing LifeLead/GoHighLevel appointments into CoolFocus for pregnancy centers, including reconciliation jobs, encrypted credentials, admin setup, Sentry monitoring, and demo/E2E tooling.
- Implemented major transaction and onboarding flows for a B2B used-car marketplace: Stripe Connect ACH checkout, webhook-driven payment status, title-verification payout gate, purchase-order states, FedEx/Postmark support, and RLS-backed permissions.
- Worked on an AI-assisted care-report workflow integrating Microsoft Bookings/Teams, recording ingest, Deepgram transcription, LLM-generated reports, Promptfoo evals, and role-specific review/report surfaces.
- Built Redtail CRM dashboard/data-review workflows for a financial-planning client, including full reconciliation sync, validation/error surfacing, sync logs, sanitized local fixtures, and staging/live-data handling.
- Used AI coding tools daily with explicit specs, tests, review passes, and prompt/eval workflows; strongest results came from small vertical slices plus careful verification rather than large unreviewed agent runs.

PROJECTS

Cube Merge — TypeScript, React, Firestore, Cloudflare Pages

Real-time cube-change review tool with no-account collaboration, immutable change history, branching, threaded comments, and CubeCobra export.

Trait Ranker — TypeScript, React, Firebase

Pairwise ranking app using heap-sort and merge-sort to reduce user comparisons, with anonymous sessions and a social guessing loop.
